

Brainstorming & Idea Prioritization Template

Date	19 June 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Member 1	Develop a Machine Learning model to predict flood risk using rainfall and weather data.	Machine Learning	1
2	Member 2	Analyze historical rainfall data and perform data visualization using Python.	Data Analysis	1
3	Member 3	Compare Decision Tree, Random Forest, KNN, and XGBoost models to select the best algorithm.	Model Development	1
4	Member 4	Build a Flask web application where users can enter weather values and get flood predictions.	Web Development	1
5	Member 5	Deploy the trained model on IBM Cloud and provide an easy-to-use interface for disaster preparedness.	Cloud Deployment	1

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Brainstorming & Idea Prioritization Template

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Develop a Machine Learning-based Flood Prediction System with a Flask Web Application using the XGBoost algorithm for accurate flood prediction and IBM Cloud deployment.	High	High	Yes	Yes
2	Develop a Real-Time Flood Monitoring and Alert System that integrates live weather APIs and automatically sends warning notifications to users in flood-prone areas.	Medium	High	No	No
3	Build a Smart Disaster Management Dashboard that visualizes rainfall, river water levels, flood-prone regions, and historical flood trends using interactive maps and analytics.	Medium	Medium	No	No
