Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	2 Marks

Customer Problem Statement Template:

A customer problem statement helps identify the challenges faced by users and guides the development of an effective solution. For this project, the following problem statements were identified based on the needs of disaster management authorities and people living in flood-prone areas.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A disaster management officer	Predict flood risks early and issue timely warnings to the public	Existing forecasting methods are slow and often inaccurate	They rely on manual analysis and limited historical data	Concerned about public safety and the effectiveness of emergency response
PS-2	A resident living in a flood-prone area	Know whether there is a possibility of flooding in my area so I can take preventive measures	I do not have access to a simple and reliable flood prediction system	Most available information is delayed or difficult for ordinary users to understand	Anxious about the safety of my family, property, and belongings
