Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS "I wish I knew about floods before they happen." "Government alerts often arrive too late." "I don't know whether my family is safe during heavy rains." "I need accurate and timely flood warnings." "I want a simple app that tells me what to do."	THINKS "Will my house flood this time?" "Should I evacuate now or wait?" "Can I trust the weather forecast?" "How can I protect my family and belongings?" "Is there a safer route to leave the area?"
<i>Sai (member)</i>	
DOES Checks weather forecasts and local news frequently. Watches nearby rivers and drainage levels. Contacts neighbors and relatives for updates. Moves important documents and valuables to safer places. Tries to evacuate when flood conditions become	FEELS Worried about family safety. Anxious during continuous heavy rainfall. Frustrated by delayed or inaccurate warnings. Stressed about property and financial losses. Hopeful that technology can provide reliable early alerts.
