

Communication

Date	28 June 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	1 Mark

Communication Plan:

Effective communication played a vital role in the successful development of the **Rising Waters** project. Team members maintained regular discussions throughout the project lifecycle to coordinate tasks, monitor progress, resolve technical issues, and prepare for the final demonstration. Communication was conducted through online meetings, messaging applications, and in-person discussions to ensure smooth collaboration and timely completion of project milestones.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp / In-person	Team Members	Discuss daily tasks, assign work, and track progress
2	Progress Update	Weekly	Google Meet / Classroom / In-person	Team Members & Guide	Review completed milestones and receive feedback
3	Issue / Bug Discussion	As Needed	WhatsApp / VS Code Live Share / In-person	Development Team	Resolve coding errors, Flask issues, and model implementation problems
4	Stakeholder Review	Bi-Weekly	Project Guide Meeting	Team Members & Project Guide	Demonstrate project progress and obtain suggestions
5	Final Demo Rehearsal	Once	College Lab / Classroom	Entire Team	Verify project functionality and prepare for final presentation
6	Documentation Review	Before Submission	Google Docs / MS Word	Team Members	Review project report, screenshots, and supporting documents

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Difficulty installing required Python libraries such as XGBoost and OpenPyXL	Installed missing packages using <code>pip</code> and verified compatibility before running the project.
2	Flask web application initially failed to load correctly due to missing HTML templates and incorrect project structure	Created the required templates and static folders, corrected the file structure, and updated Flask routes.
3	Model prediction and preprocessing issues, including file path errors and feature scaling	Verified dataset paths, retrained the model, saved the trained model (<code>floods.save</code>) and scaler (<code>scaler.save</code>), and tested predictions successfully.
