

Project Demo Planning

Date	28 June 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demonstration is essential to showcase the capabilities of the **Rising Waters** Flood Prediction System. The demo will present the complete machine learning workflow, from data collection and preprocessing to model training, evaluation, and deployment using a Flask web application. The presentation will also include a live demonstration where users enter weather and rainfall parameters to receive an instant flood prediction.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Introduce the project, explain the importance of flood prediction, objectives, and motivation behind the project.	2	Team Member 1
2	Solution Overview	Explain the dataset, data preprocessing, exploratory data analysis (EDA), machine learning models, and overall project workflow.	3	Team Member 2
3	Team Member 2	Present the machine learning algorithms (Decision Tree, Random Forest, KNN, XGBoost), model evaluation, and best model selection.	3	Team Member 3
4	Live Web Application Demonstration	Demonstrate the Flask web application by entering weather and rainfall values and displaying the prediction result (Flood Chance / No Flood Chance).	4	Team Member 4
5	Project Benefits & Future Scope	Explain applications, advantages, limitations, and future enhancements such as real-time weather API integration and cloud deployment.	2	Team Member 1
6	Question & Answer Session	Respond to questions from the evaluation panel regarding the implementation, algorithms, and project outcomes.	3	Entire Team

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Briefly explain flood-related challenges, project objectives, and the need for early flood prediction.
2	Solution Overview	Describe the dataset, preprocessing techniques, exploratory data analysis, feature scaling, machine learning algorithms, and Flask architecture.
3	Live Feature Demonstration	Launch the Flask application, enter sample weather and rainfall values, and display the flood prediction result in real time. Highlight the Home, Prediction, and Result pages.
4	Q&A Session	Answer questions related to dataset selection, preprocessing, machine learning models, Flask deployment, project limitations, and future improvements.
