

Team Involvement in Demonstration

Date	29 June 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	1 Mark

Team Involvement in Demonstration:

The project demonstration was conducted collaboratively, with each team member presenting a specific part of the project. Responsibilities were divided to ensure that every member actively contributed to explaining the project, demonstrating the application, and answering questions from the evaluation panel.

S.No	Team Member Name	Role in Demo	Section Presented	Contribution Summary	Participation (Active / Passive)
1	Sai Mukesh Chebrolu	Team Leader	Introduction & Problem Statement	Introduced the project, explained the objectives, motivation, and real-world need for flood prediction. Coordinated the overall presentation.	Active
2	Venkatasivasai Thadiparthi	Data Analyst	Dataset Collection, Exploratory Data Analysis (EDA), and Data Preprocessing	Explained the dataset, performed descriptive analysis, discussed visualization results, missing value handling, outlier treatment, and feature scaling.	Active
3	Shaik Safiy	Machine Learning Developer	Model Building & Evaluation	Presented the implementation of Decision Tree, Random Forest, KNN, and XGBoost models, model evaluation metrics, and best model selection.	Active
4	Bhagya Lakshmi	Flask Developer	Web Application Demonstration	Demonstrated the Flask application, prediction form, result page, and explained how the trained model and	Active

				scaler were integrated into the application.	
5	Nuvvula Rohith	Documentation & Testing	Project Documentation and Testing	Presented the project report, testing results, screenshots, and future scope. Assisted during the question-and-answer session.	Active

Team Coordination Notes:

Aspect	Details
Team Leader / Coordinator	Sai Mukesh Chebrolu
Overall Team Coordination Rating (1-5)	5 / 5
Any issues during demo	Minor issues such as verifying the Flask server and checking model files before starting the demonstration.
How issues were resolved	The team verified the project structure, ensured that <code>floods.save</code> and <code>scaler.save</code> were present, restarted the Flask application, and successfully completed the demonstration.
